Tuesday, Nov. 27th, 6:30 to 7:30 p.m.

Chapel Hill Public Library, 100 Library Dr. Meeting Room A

Public welcome

NAMI Orange provides free education meetings to provide the latest research, resources, information, legislation and more about serious mental illness treatments and recovery. Meetings are held on the fourth Tuesdays from 6:30 to 7:30 p.m. in Sept., Nov., Jan., March and May.

For more information call the NAMI Orange Help Line at 919-929-7822.

*Eric McClellan, Molecular Sales Consultant
at Myrida Genetics will present:*

What is the GeneSight[®] test?

If you're suffering from mental health challenges, the last thing anyone wants to go through is a lengthy trial and error process with multiple medications. The process can be frustrating and leave people feeling worse, not better. Fortunately, the GeneSight[®] genetic test can provide doctors answers that quickly lead to relief.

Pharmacogenomic testing helps empower your doctor with the exact information needed to prescribe you the best medication for you. By examining how your DNA responds to specific medications such as antidepressants, this simple, painless test lets doctors know which medications may not work for you, so you can get back to feeling like yourself again. That's the power and simplicity of the GeneSight[®] test.
